

PROJECT DESIGN PHASE – II

Technology Stack (Architecture & Stack)

Date: 30 September 2026
Team ID: Msu207Team8-6ab24dfd5bdbdc53c88f47
Project Name: Implement Client Script and UI Policy
Maximum Marks: 4 Marks

Technical Architecture

The proposed system is implemented using the ServiceNow platform. The user interacts with a ServiceNow form through a web browser. Client Scripts handle client-side validation and dynamic processing, while UI Policies control field visibility, mandatory status, and read-only behavior.

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Interface through which users interact with the ServiceNow application and forms.	ServiceNow Web UI, HTML, CSS, JavaScript
2	Application Logic-1	Performs client-side validation and dynamic form processing.	ServiceNow Client Scripts, JavaScript
3	Application Logic-2	Controls field visibility, mandatory status, and read-only behavior.	ServiceNow UI Policies
4	Application Logic-3	Handles form submission and validates required conditions.	Client Script, ServiceNow Glide Form API
5	Database	Stores application records and form data.	ServiceNow Database
6	Cloud Database	Database infrastructure provided as part of the ServiceNow cloud platform.	ServiceNow Cloud Database
7	File Storage	Stores project-related documents, screenshots, and configuration files.	Local File System / GitHub Repository
8	External API-1	No external API is required for the core implementation.	Not Applicable
9	External API-2	No external API is required for the core implementation.	Not Applicable
10	Machine Learning Model	No machine learning model is required for this project.	Not Applicable
11	Infrastructure (Server / Cloud)	Hosts and executes the ServiceNow application and configurations.	ServiceNow Cloud Platform

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	The project primarily uses ServiceNow platform features and JavaScript rather than an external open-source framework.	JavaScript
2	Security Implementations	Access controls and ServiceNow security mechanisms are used to protect application data and configurations.	ServiceNow ACLs, User Roles, Access Controls
3	Scalable Architecture	Client Scripts and UI Policies can be added or modified independently as application requirements increase.	ServiceNow Platform
4	Availability	The application is hosted on the ServiceNow cloud platform and can be accessed through a web browser when the instance is available.	ServiceNow Cloud Platform
5	Performance	Client-side validation and UI behavior are handled on	JavaScript, Client

S.No	Characteristics	Description	Technology
		the form to provide responsive interaction and reduce unnecessary processing.	Scripts, UI Policies

Technology Stack Summary

Frontend

- ServiceNow Web UI
- HTML
- CSS
- JavaScript

Application Logic

- Client Scripts
- UI Policies
- Glide Form API

Database

- ServiceNow Database

Platform

- ServiceNow Cloud Platform

Version Control & Documentation

- GitHub Public Repository

External Services

- Not required for the core project

Machine Learning

- Not applicable

Architecture Flow

```

User
↓
ServiceNow Web Form
↓
User enters / changes data
↓
Client Script

```

Conclusion

The proposed architecture uses the ServiceNow platform to implement Client Scripts and UI Policies for dynamic form behavior and client-side validation. The architecture is simple, maintainable, and suitable for demonstrating ServiceNow form customization without requiring external APIs or machine learning components.
