Project Name: Implement Client Script and UI Policy

Maximum Marks: 2 Marks

1. Problem Statement (Problem to be Solved)

ServiceNow forms may have problems such as:

- Incorrect or incomplete data entry.
- Difficulty in identifying mandatory fields.
- Unnecessary fields displayed on the form.
- Fields may need to be read-only under certain conditions.
- Lack of immediate validation feedback.
- Static form behavior can make the form less user-friendly.

These problems can increase user errors and make form filling difficult and time-consuming.

2. Idea / Solution Description

The proposed solution is to implement **Client Scripts and UI Policies** in ServiceNow to make forms more dynamic, interactive, and user-friendly.

Client Scripts will be used to:

- Validate user inputs.
- Display validation messages.
- Perform actions when field values change.
- Validate information before form submission.

UI Policies will be used to:

- Make fields mandatory when required.
- Show or hide fields based on conditions.
- Make fields read-only when required.
- Dynamically control the behavior of form fields.

This solution will improve the overall form experience and reduce user errors.

3. Novelty / Uniqueness

The uniqueness of the solution is that the ServiceNow form will respond dynamically to user actions.

Instead of showing the same fields and behavior all the time, **Client Scripts and UI Policies** will automatically control fields based on specific conditions.

This provides:

- Dynamic form behavior.
- Real-time validation.
- Conditional field visibility.
- Conditional mandatory fields.
- Conditional read-only fields.
- Better user interaction.

4. Social Impact / Customer Satisfaction

The solution helps ServiceNow users complete forms easily and correctly.

Expected benefits:

- Reduces incorrect data entry.
- Helps users identify mandatory fields.
- Reduces unnecessary information on the form.
- Provides immediate validation feedback.
- Saves users' time.
- Improves user satisfaction.
- Makes ServiceNow forms simple and easy to use.

Target Customer:

The main target customers are **ServiceNow form users** who need a simple, clear, dynamic, and responsive form experience.

5. Business Model (Revenue Model)

The solution can be provided as a **ServiceNow customization and implementation service** for organizations.

Revenue can be generated through:

- ServiceNow implementation services.
- Form customization services.
- Client Script and UI Policy development.
- Maintenance and support services.
- Training for ServiceNow users and administrators.

Organizations can pay based on the customization, implementation, and maintenance services provided.
