

1. PROJECT DESIGN PHASE – II

Data Flow Diagram & User Stories

Date: 30 September 2026

Team ID: Msu207Team8-6ab24dfd5bdbdc53c88f47

Project Name: Implement Client Script and UI Policy

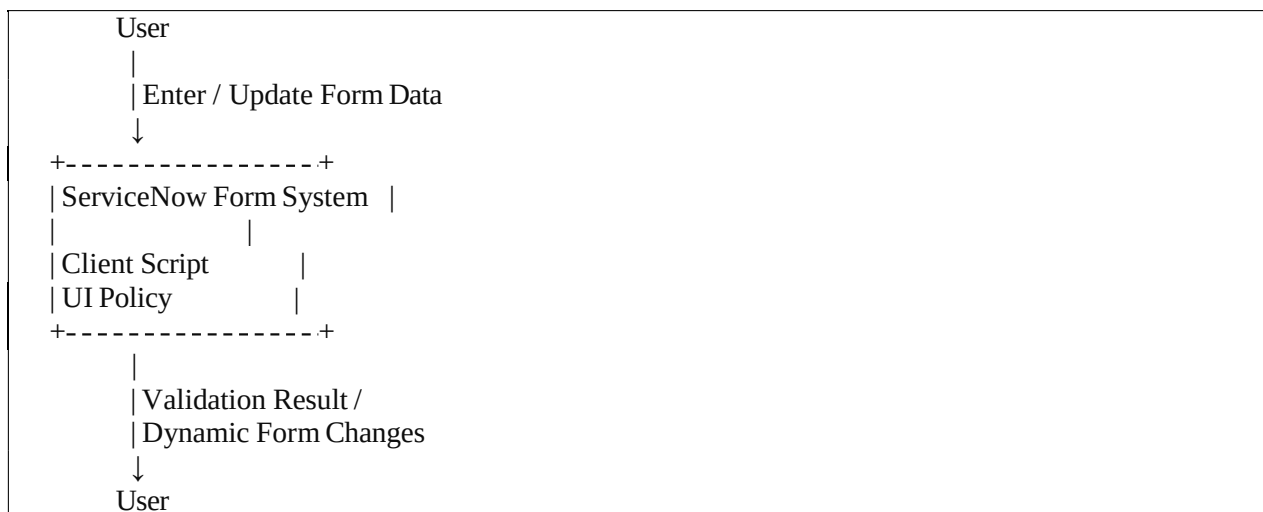

Maximum Marks: 4 Marks

1. Data Flow Diagram (DFD)

Level 0 – Context Diagram

External Entity: ServiceNow User

Flow:

Level 1 – Data Flow

DFD Description

1. The user enters information into the ServiceNow form.
2. The Client Script processes and validates user input.
3. The UI Policy checks predefined conditions.
4. Based on the conditions, fields are made visible, hidden, mandatory, or read-only.
5. Validation messages are displayed when required.
6. The updated form is presented to the user.
7. The user can correct the information and submit the form.

2. User Stories

Customer / ServiceNow Form User

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Customer	Form Access	USN-1	As a user, I can open the ServiceNow form and enter the required information.	The form opens successfully and allows data entry.	High	Sprint-1
Customer	Input Validation	USN-2	As a user, I can receive validation when I enter incorrect or incomplete information.	An appropriate validation message is displayed.	High	Sprint-1
Customer	Dynamic Field Control	USN-3	As a user, I can see fields change based on the selected values.	Fields are displayed or hidden according to the defined condition.	High	Sprint-1
Customer	Mandatory Field Control	USN-4	As a user, I can be informed when a field is required.	The required field becomes mandatory when the condition is satisfied.	High	Sprint-1
Customer	Read-only Field	USN-5	As a user, I can view	The selected field	Medium	Sprint-

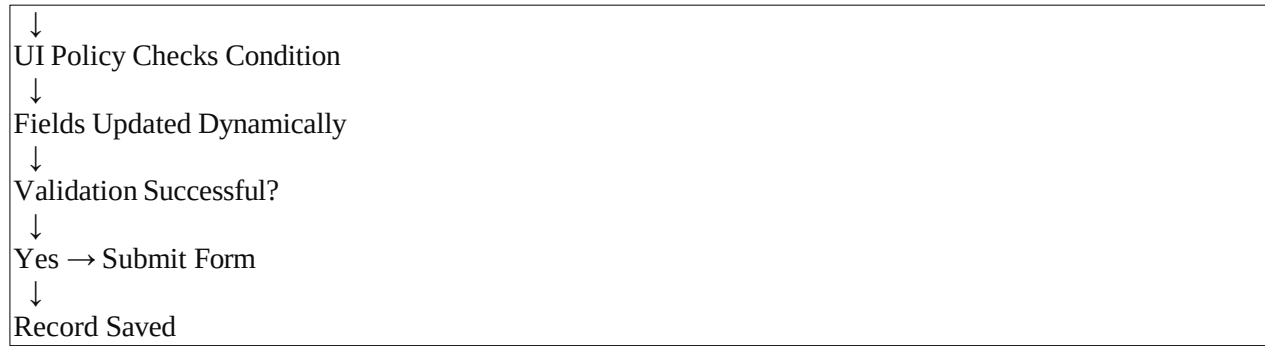

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
	Control		fields that become read-only when required.	cannot be modified when the condition is satisfied.		2
Customer	Form Submission	USN-6	As a user, I can submit the form after entering valid information.	The form is submitted successfully when all required conditions are satisfied.	High	Sprint-2

Administrator / Developer

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Client Script Configuration	USN-7	As an administrator, I can create and configure Client Scripts for form validation.	Client Script executes according to the defined condition.	High	Sprint-1
Administrator	UI Policy Configuration	USN-8	As an administrator, I can create UI Policies to control form fields.	UI Policy changes field properties according to the condition.	High	Sprint-1
Administrator	Validation Management	USN-9	As an administrator, I can define validation rules for form fields.	Invalid input produces the configured validation response.	Medium	Sprint-2
Administrator	Form Behavior Management	USN-10	As an administrator, I can configure field visibility, mandatory status, and read-only status.	Configured field behavior works correctly on the form.	High	Sprint-2

Final Project Flow

Project Design Objective

The design provides a clear flow between the **ServiceNow user, form, Client Scripts, and UI Policies**. It ensures that user inputs are validated and that form fields dynamically respond to predefined conditions.
